Hi Juan,

I'm sorry. I deleted the calibfiles directory. So what I did is the following:

On windows:

1. Unpack Ubuntu-10.04-Juan.zip
2. Execute Ubuntu-10.04.vmx

On virtual machine

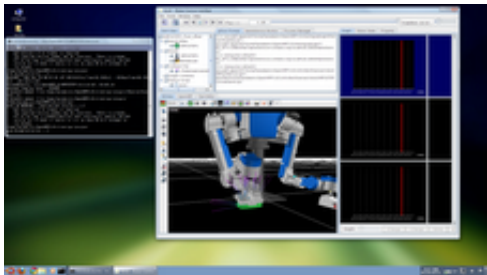

3. Put calib.dat to ~/calibfiles directory.
4. Launch OpenHRP as:
cd src/OpenHRP3.0-HRP2STEP1/bin/unix
./GrxUI.sh
5. Load HRP2STEP1_Pivot_offset.xml
6. Start simulation by pressing the button with triangle and human figure
6. Start script by pressing the button with triangle and document

While executing tasks in virtual machine, I have to unlock the key profile.

Then the simulation will work.
